SUMMARY

Electronics & Communication Engineering student at SMVIT, Bengaluru (CGPA: 8.3, graduating 2027) with a strong foundation in Data Structures, Algorithms. Specialist in Android development, working with Kotlin, Jetpack Compose and Firebase, creating and building real-world apps ranging from real-time chat platforms to content systems that are cloud-synced. Certified in Android & Kotlin Development, Generative AI, and Business Analysis by Microsoft & LinkedIn. Seeking roles in Android development and software engineering.

EDUCATION

Sir M. Visvesvaraya Institute of Technology

B.E. in Electronics and Communication Engineering | **CGPA - 8.3**

2023 - 2027

Bengaluru, Karnataka

Roseland International School

CBSE - 12th grade | **Percentage - 95.17**

2021

Rewari, Haryana

Roseland International School

CBSE - 10th grade | **Percentage - 93.40**

2019

Rewari, Haryana

TECHNICAL SKILLS

Languages: Kotlin, Python, JavaScript, C, C++

Mobile Development: Android Development, Jetpack Compose, Firebase, Realtime Database, XML

Data Analysis and ML: Pandas, NumPy, LightGBM, Feature Engineering

Core Concepts: Data Structures and Algorithms, OOPs, Problem Solving

Tools and Technologies: Git, GitHub, Android Studio, VS Code

Business and AI Skills: Requirements Gathering, Process Mapping, Generative AI, Prompt Engineering, LLM Integration, API Integration

PROJECTS

MealMind | Zomathon 2026 | Python, LightGBM, Google Gemini API, Pandas

2026

- Built a two-stage food add-on recommendation system that retrieves 50 candidate items via co-occurrence patterns, then ranks them with LightGBM to serve top-8 suggestions in under 300ms.
- Integrated Google Gemini to analyze cart completeness - detects missing meal components and adjusts recommendations accordingly.
- Engineered 34 features across cart state, item attributes, and user context; improved AUC-ROC from 0.753 (baseline) to 0.793 with an estimated Rs. 449 lift per session and 21% recommendation acceptance rate.

Blog App | Kotlin, Firebase Realtime Database, Firebase Auth, Android Studio

2026

- Integrated a global article feed with live like counts and cloud-synced data via Firebase Realtime Database.
- Engineered a bookmarking system allowing users to save and retrieve favorite articles across sessions with custom backend logic.
- Optimized UI performance using Glide for image rendering and Coroutines for asynchronous data fetching.
- Streamlined navigation by implementing Parcelable data passing and high-performance content rendering with NestedScrollView.

Chat Room App Kotlin, Firebase Realtime Database, Android Studio	2025
• Built a real-time chat app with user login, chat rooms, and instant message synchronization. • Used Firebase Realtime Database to broadcast and synchronize messages instantly across users. • Designed clean UI screens and implemented room-based chat logic for smooth interactions. • Managed authentication, message handling, and state flow using Kotlin.	

Secure Authentication System C++, File Handling, VS Code	2025
• Designed and developed a secure, terminal-based authentication system in C++ supporting user registration, login, and password updates. • Implemented custom SHA-256 hashing for secure password storage without third-party libraries. • Used modular programming with file-based storage (CSV) to enable multi-user support.
